# Installation Manual

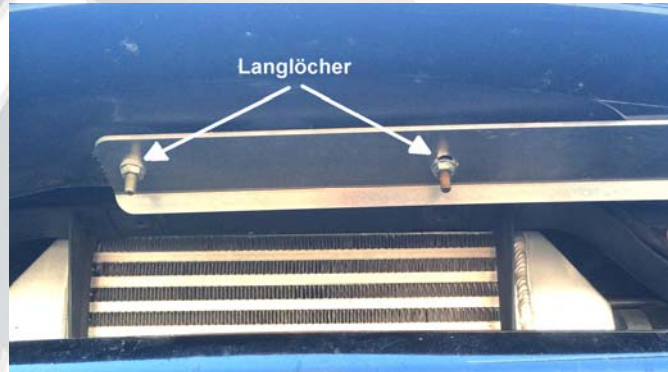

## Numberplate Bracket / Plinth Left & Right

NAB-301040L; NAB-301040R

The I.L.Motorsport numberplate bracket is available for both left- and rightside, both versions are mounted on the same location. The TÜV requirements are met, and the new position of the numberplate is therefore allowed. The length of the numberplate is not changed and is set by the length of the numberplate bracket.

Uninstall the old numberplate bracket / plinth on your MX-5.

Now mount the new bracket / plinth on the position as shown in the below picture (front bumper opening) by using the supplied hardware.

The new bracket has elongated holes so you can perfectly align the bracket / plinth to your front bumper. Please make sure to leave a small (even) gap between bracket and front bumper to avoid damaging the paintwork on your MX-5.

The bracket / plinth is supplied with all necessary hardware.

2 x M6x25 Screw  
2 x M6 Nylock Nut  
4 x Washer  
2 x M6x20 Nut & Washer  
2 x plug black

For installation of the bracket/plinth on the front bumper  
For mounting the bracket/plinth.  
For installation of the bracket/plinth  
For mounting the numberplate to the bracket/plinth.  
To cover the screws that hold the numberplate in place.
